

Winchendon Landfill Site Observation – September 29, 2023

TO: Brian Croteau, DPW Director
FROM: Aaron Sabbs, PE, Tighe & Bond
COPY: Alex Fagnand, PE, Tighe & Bond
DATE: October 24, 2023

On September 29, 2023, Aaron Sabbs from Tighe & Bond visited the Winchendon Landfill (hereby referred to as the "Site") to monitor the grading and shaping activities of the Landfill Closure Project. The Site, which is located at 580 River Street, is the former Mabardy Landfill. It is owned and operated by W.L. French Corporation (Operator) as the Winchendon Landfill. As part of the Landfill Closure Project, the Massachusetts Department of Environmental Protection (MassDEP) has permitted the acceptance of up to 415,000 cubic yards of COMM 97-001 material as defined by MassDEP Policy. A Minor Modification of Existing Landfill was approved by MassDEP May 5, 2023 which increased the permitted maximum volume to 480,000 cubic yards. In accordance with Condition 13 of the Landfill Closure Agreement between the Town and the Operator, the Site was reviewed for compliance with the following documents:

- Corrective Action Design permit approval issued on September 23, 2020 and Corrective Action Design Plans prepared by Langdon Environmental, LLC, dated June 2019 and revised October 2019.
- Initial Operations Plan, by Langdon Environmental, LLC, dated January 2021, revised to include temporary rip rap settling area.

Landfill Operations

General landfill operations appeared to comply with best practices and the Corrective Action Design. While on site, material was placed and spread by bulldozer in the general area of Section B-B of Sheet C-5 of the Corrective Action Design, within the limits designated for initial placement. Additional material has been placed on the slope adjacent to the proposed stormwater basin. This fill has expanded the landfill's footprint beyond the existing access road.

Additional clearing has also been completed to the north and east of the landfill. The area that was cleared on the north side of the site appears to be within the original limit of work. The area that was cleared on the east side of the site reflects the proposed limit of final cap shown on the plan dated November 2022. The proposed limit was created based on the result of a test pits program performed in the general area. The Operator indicated that they have received verbal approval from MassDEP to expand operations and that they expect to receive an updated permit based on the new limits this month.

Stormwater and Erosion

Stormwater conveyances have been constructed per the Initial Operations Plan as revised to include a temporary rip rap settling area. This plan was submitted to MassDEP under a Major Permit Modification (BWP SQ 11). A swale, including check dams, has been constructed from the temporary stormwater basin to the temporary settling area. Overflow from the temporary stormwater basin runs to the settling area with a PVC drainage pipe running beneath the

access road. The swale from the northern section of the site to the temporary stormwater basin has not yet been constructed. Sediment built up in the temporary rip rap settling area should be cleared out before it affects its functionality.

As the landfill's footprint has grown, portions of the swale at the toe of the slope have been filled, reducing the length of the swale. The PVC drainage pipe was also previously broken when additional rip rap was placed and has not been repaired.

Sediment that had previously built up against the erosion control at the base of the southwestern slope has recently been removed and a berm has been created to slow the flow of water before it reaches the erosion control. This area has seen repeated issues due to erosion on the slope and will require continued monitoring and maintenance.

Vegetation on the hydroseeded slopes has grown in inconsistently and there are several areas where erosion has caused rills and gullies to form.

The areas that were recently cleared of vegetation did not have erosion control present at the time of the site visit. The Operator indicated that erosion control would be installed.

Material Accepted

Tighe & Bond reviewed the attached Net Daily Summary Report received for the month of September, which details the total tonnage and number of loads of material received by the facility. As indicated in the attached Table 1, a total of 21,082.14 tons of material was received in September, which results in 30,340.31 tons remaining of the total 912,000 tons permitted. Based on a utilization factor of 1.9 tons per cubic yard of soil, the total volume received in September was 11,095.86 cubic yards, which results in 15,968.58 cubic yards remaining. This represents about 3% of the total permitted volume remaining based on the updated BWP SW 22 permit.

The DEP permit limits the number of loads received to 64 per day without special Town permission. There were no days in September in which the number of loads received was greater than 64.

Enclosed are photographs summarizing the items observed during the site visit, and Table 1, which notes the monthly summary of material accepted.

Photo 1 – Eastern slope and access road, looking north.

Photo 2 –Raised access road at the base of the eastern slope.

Photo 3 –Material placed and graded at the center of the Site with grading for truck access

Photo 4 – Cleared area east of the landfill where test pits were previously dug

Photo 5 – Southwestern slope with sediment cleared away from the erosion control.

Photo 6 – Monitoring well and southwestern slope.

Photo 7 – Fill material placed over previous access road

Photo 8 – Cleared area north of the landfill

Photo 9 - Temporary rip rap settling area.

Photo 10 – Material placed and graded at the northern limits of the site.

Photo 11 –Western limits of the Site.

Photo 12 –Material placed and graded at the center of the Site with grading for truck access

Photo 13 –Material placed and graded at the center of the Site with grading for truck access
