

Winchendon Landfill Site Observation – June 28, 2023

TO: Brian Croteau, DPW Director
FROM: Aaron Sabbs, PE, Tighe & Bond
COPY: Alex Fagnand, PE, Tighe & Bond
DATE: July 24, 2023

On June 28, 2023, Aaron Sabbs from Tighe & Bond visited the Winchendon Landfill (hereby referred to as the "Site") to monitor the grading and shaping activities of the Landfill Closure Project. The Site, which is located at 580 River Street, is the former Mabardy Landfill. It is owned and operated by W.L. French Corporation (Operator) as the Winchendon Landfill. As part of the Landfill Closure Project, the Massachusetts Department of Environmental Protection (MassDEP) has permitted the acceptance of up to 415,000 cubic yards of COMM 97-001 material as defined by MassDEP Policy. A Minor Modification of Existing Landfill was approved by MassDEP May 5, 2023 which increased the permitted maximum volume to 480,000 cubic yards. In accordance with Condition 13 of the Landfill Closure Agreement between the Town and the Operator, the Site was reviewed for compliance with the following documents:

- Corrective Action Design permit approval issued on September 23, 2020 and Corrective Action Design Plans prepared by Langdon Environmental, LLC, dated June 2019 and revised October 2019.
- Initial Operations Plan, by Langdon Environmental, LLC, dated January 2021, revised to include temporary rip rap settling area.

Landfill Operations

General landfill operations appeared to comply with best practices and the Corrective Action Design. While on site, material was placed and spread by bulldozer in the general area of Sections B-B and C-C of Sheet C-5 of the Corrective Action Design, within the limits designated for initial placement. These areas have been graded and gravel has been placed to allow truck access as the elevation in these areas increases. The access road on the east side of the site has been rebuilt over fill to allow access to the northern part of the site.

Stormwater and Erosion

Stormwater conveyances have been constructed per the Initial Operations Plan as revised to include a temporary rip rap settling area. This plan was submitted to MassDEP under a Major Permit Modification (BWP SQ 11). A swale, including check dams, has been constructed from the temporary stormwater basin to the temporary settling area. Overflow from the temporary stormwater basin runs to the settling area with a PVC drainage pipe running beneath the access road. The swale from the northern section of the site to the temporary stormwater basin has not yet been constructed.

It appears that fill has been placed in the swale to allow construction equipment to cross it. Additional fill has also been placed as the footprint has grown. The fill is preventing water from flowing through the swale to the settling area. The PVC drainage pipe was also previously broken when additional rip rap was placed and has not been repaired.

Erosion on the southwestern slope has caused an accumulation of sediment at the base of the slope. Sediment has been periodically removed from this area and the erosion control barriers were recently replaced. Recent rainfall has caused further accumulation of sediment and the newly-installed haybales appear to be saturated and are being pushed over by the sediment deposit. While we have observed and noted these issues, Tighe & Bond is not acting as the Stormwater Pollution Prevention Plan (SWPPP) inspector on site.

Sediment was noted at the entrance to the site and appears to have been tracked onto River Street. Per the Corrective Action Design, the Operator must ensure that all sediment spilled, dropped, washed, or tracked onto the public right-of-way is removed immediately. The contractor maintains a street sweeper truck on site and noted that they clean material from River Street daily.

Material Accepted

Tighe & Bond reviewed the attached Net Daily Summary Report received for the month of June, which details the total tonnage and number of loads of material received by the facility. As indicated in the attached Table 1, a total of 17,109 tons of material was received in June, which results in 102,769 tons remaining of the total 912,000 tons permitted. Based on a utilization factor of 1.9 tons per cubic yard of soil, the total volume received in June was 9,004 cubic yards, which results in 54,089.89 cubic yards remaining. This represents about 11% of the total permitted volume remaining based on the updated BWP SW 22 permit.

The DEP permit limits the number of loads received to 64 per day without special Town permission. There were no days in June in which the number of loads received was greater than 64.

Enclosed are photographs summarizing the items observed during the site visit, and Table 1, which notes the monthly summary of material accepted.

Photo 1 – Eastern slope and access road, looking north.

Photo 2 –Raised access road at the base of the eastern slope.

Photo 3 –Material placed and graded at the center of the Site with grading for truck access

Photo 4 – Southwestern slope with sediment and water accumulating against the erosion control.

Photo 5 – Monitoring well and erosion in the southwestern slope.

Photo 6 – Southwestern side slope.

Photo 7 – Temporary stormwater overflow catch basin.

Photo 8 – Swale between temporary stormwater basin and temporary rip rap settling area.

Photo 9 - Temporary rip rap settling area.

Photo 10 – Material placed and graded at the northern limits of the site.

Photo 11 –Erosion control with sediment buildup on the western limits of the Site.

Photo 12 –Material placed and graded at the center of the Site with grading for truck access

Photo 13 –Material placed and graded at the center of the Site with grading for truck access

Photo 14 –Material tracked onto River Street
