

## **Winchendon Landfill Site Observation – March 29, 2023**

**TO:** Brian Croteau, DPW Director  
**FROM:** Aaron Sabbs, PE, Tighe & Bond  
**COPY:** Alex Fagnand, PE, Tighe & Bond  
**DATE:** May 12, 2023

---

On March 29, 2023, Aaron Sabbs from Tighe & Bond visited the Winchendon Landfill (hereby referred to as the "Site") to monitor the grading and shaping activities of the Landfill Closure Project. The Site, which is located at 580 River Street, is the former Mabardy Landfill. It is owned and operated by W.L. French Corporation (Operator) as the Winchendon Landfill. As part of the Landfill Closure Project, the Massachusetts Department of Environmental Protection (MassDEP) has permitted the acceptance of up to 415,000 cubic yards of COMM 97-001 material as defined by MassDEP Policy. In accordance with Condition 13 of the Landfill Closure Agreement between the Town and the Operator, the Site was reviewed for compliance with the following documents:

- Corrective Action Design permit approval issued on September 23, 2020 and Corrective Action Design Plans prepared by Langdon Environmental, LLC, dated June 2019 and revised October 2019.
- Initial Operations Plan, by Langdon Environmental, LLC, dated January 2021, revised to include temporary rip rap settling area.

### **Landfill Operations**

General landfill operations appeared to comply with best practices and the Corrective Action Design. While on site, material was placed and spread by bulldozer in the general area of Section B-B of Sheet C-5 of the Corrective Action Design, within the limits designated for initial placement. This area has been graded and gravel has been placed to allow truck access as the elevation in this area increases. Material has been placed over the existing access road on the east side of the site to expand the fill footprint to its proposed limits.

### **Stormwater and Erosion**

Stormwater conveyances have been constructed per the Initial Operations Plan as revised to include a temporary rip rap settling area. This plan was submitted to MassDEP under a Major Permit Modification (BWP SQ 11). A swale, including check dams, has been constructed from the temporary stormwater basin to the temporary settling area. Overflow from the temporary stormwater basin runs to the settling area with a PVC drainage pipe running beneath the access road. The swale from the northern section of the site to the temporary stormwater basin has not yet been constructed.

A drainage channel was recently excavated on the east side of the site, running along the toe of the slope to the temporary stormwater basin.

It appears that fill has been placed in the swale to allow construction equipment to cross it. The fill is preventing water from flowing through the swale to the settling area. The PVC drainage pipe was also previously broken when additional rip rap was placed and has not been repaired.

Erosion on the southwestern slope has caused an accumulation of sediment at the base of the slope. The sediment in this area should be removed before it overtops the erosion control at the limit of work.

Hydroseed was applied to the landfill's slopes in late fall. However, the seed does not appear to have germinated, and rainfall has caused erosion throughout the slopes, including large gullies in some locations. Recent snowmelt has exacerbated this issue. Rainwater has accumulated at the base of the southwestern slope, with a large amount of standing water at the erosion control barrier, which appears to be in danger of overtopping. Runoff from the eastern slope has also caused a large buildup of water on the temporary access road, rendering it impassible.

These stormwater issues appear to have gotten worse in the recent past and remain unchanged since the previous visits. The late season hydroseed did not germinate and the slopes have eroded. We recommend that remedial action be taken to provide temporary stabilization measures on the slope and maintain the swales and all BMPs at the toe of the slope to remove the standing water and to ensure that the silt and sediment does not travel beyond the limit of the project. While we have observed and noted these issues, Tighe & Bond is not acting as the Stormwater Pollution Prevention Plan (SWPPP) inspector on site.

### **Material Accepted**

Tighe & Bond reviewed the attached Net Daily Summary Report received for the month of March, which details the total tonnage and number of loads of material received by the facility. As indicated in the attached Table 1, a total of 23,247.59 tons of material was received in March, which results in 28,886.05 tons remaining of the total 788,500 tons permitted. Based on a utilization factor of 1.9 tons per cubic yard of soil, the total volume received in March was 12,235.57 cubic yards, which results in 15,203.18 cubic yards remaining. This represents about 4% of the total permitted volume remaining.

An aerial survey completed by Civil & Environmental Consultants, Inc. (CEC) on April 5, 2023, indicated that there is a total of 147,499 cubic yards of airspace remaining between the April 5, 2023 grades and the top of the final permitted landfill grades. Subtracting the volume of proposed landfill capping materials from the total remaining volume leaves 64,175 cubic yards of airspace remaining for the subgrade. However, this is greater than the total remaining volume allowed in accordance with the Corrective Action Design permit which may not be exceeded without prior permit modification.

Per the attached Monthly Soils Summary, CEC has submitted a Proposed Limit of Final Cap plan with a revised limit of waste based on recent test pits which located existing waste beyond the limits of waste that were previously known.

The DEP permit limits the number of loads received to 64 per day without special Town permission. There were no days in March in which the number of loads received was greater than 64.

Enclosed are photographs summarizing the items observed during the site visit, and Table 1, which notes the monthly summary of material accepted.

April 17, 2023

James A. McQuade, Section Chief  
Solid Waste Management Program  
MassDEP Central Regional Office  
8 New Bond Street  
Worcester, Massachusetts 01606

Subject: Monthly Reporting – March 2023  
Permit No. X283688  
Former Mabardy Landfill  
River Street in Winchendon, Massachusetts  
CEC Project No: 306-000

Dear Mr. McQuade:

Civil & Environmental Consultants, Inc. (CEC) presents this letter to fulfill the monthly reporting and recordkeeping requirements at the above referenced landfill (hereby referred to as the “Site”). This submittal was prepared in accordance with Section E of the Specific Permit Conditions as described in the Permit Number X283688 (CAD permit approval) in order to document tonnage received in the past month and any operational problems or deficiencies encountered in the Project.

## **1.0 MATERIAL ACCEPTED**

W.L. French began to import approved soils for shaping and grading at the Site on January 19, 2021 in accordance with the CAD permit approval issued on September 23, 2020. A summary table showing the tonnage of material accepted at the Landfill over the previous month and cumulative yardage and tonnage of material accepted is provided with this letter. A total of 788,500 tons are permitted for the facility. As presented in the attached summary, 23,247.59 tons (12,235.57 cubic yards) was received by the facility in March 2023 which results in 28,886.05 tons (15,203.18 cubic yards) remaining.

## **2.0 OPERATIONAL MODIFICATIONS**

During the initial test pitting within the northern permitted stormwater basin footprint, groundwater elevations were detected at higher elevations than the bottom elevation of the permitted basin. Therefore, a stormwater basin redesign was required to allow the stormwater management system to function as originally intended. A temporary basin was installed in the same general vicinity and a permanent stormwater redesign was prepared and submitted to

James A. McQuade - MassDEP  
CEC Project: 306-000  
Page 2  
April 17, 2023

MassDEP under a Major Permit Modification (BWP SW 11) on September 6, 2022. The permanent stormwater basin design was approved for an amended Order of Conditions by the Winchendon Conservation Commission at a public hearing on June 9, 2022.

A Test Pit Summary Report was issued to MassDEP on November 15, 2022 that summarized the results of the test pit investigation performed by CEC personnel on October 17th and 19th, 2022 (Auth. # SW45-0000182). Observations of the test pit investigation were included in the Test Pit Summary Report that provided a 'Proposed Limit of Final Cap' and redesigned the limit of waste based on the observations of the test pit investigation.

In April 2023, CEC has prepared for submittal an Application for Landfills - Minor Modification BWP SW 22 that describes proposed modifications to the previously permitted and approved final closure conditions.

Please do not hesitate to contact either of us with any questions or comments regarding the work performed.

Sincerely,

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

Worcester, Massachusetts 01606

Subject: Quarterly Reporting – Q1 2023  
Permit No. X283688  
Former Mabardy Landfill  
River Street in Winchendon, Massachusetts  
CEC Project No: 306-000

Dear Mr. McQuade:

Civil & Environmental Consultants, Inc. (CEC) has prepared this letter on behalf of W.L. French to fulfill the quarterly reporting and recordkeeping requirements at the above referenced landfill (hereby referred to as the “Site”). This submittal was prepared in accordance with Section E of the Specific Permit Conditions as described in the Permit Number X283688 (Corrective Action Design (CAD) permit approval) in order to provide documentation of aerial surveys, airspace remaining, and settlement on a quarterly basis.

W.L. French began to import approved soils for shaping and grading at the Site on January 19, 2021 in accordance with the CAD permit approval issued on September 23, 2020. A summary outlining the material accepted at the Site over the previous quarter, remaining airspace for the Site, and settlement over the previous quarter is provided with this letter.

### **Quarterly Survey**

W.L. French completed the First Quarter aerial survey of the site using an unmanned aerial vehicle (UAV or drone) on April 5, 2023. This aerial survey was compared to the Final Grading Plan from the CAD permit application, Drawing Number C-4, prepared by Langdon Environmental LLC, to determine the remaining available airspace for the Site. W.L. French provided the First Quarter aerial survey to CEC in AutoCAD format, and CEC completed the volume calculation and prepared a figure, which is attached to this submittal.

### **Remaining Airspace**

Based on the April 5, 2023 survey, and calculations completed by CEC, a total of 147,499 cubic yards of airspace is remaining between the April 5, 2023 grades and the top of Final Permitted Landfill grades. To calculate the remaining grading and shaping material airspace, the final cover soils were subtracted from the volume calculation completed from the survey information. Based on the CAD permit approval, the permitted Final Cover system consists of 8 inches of topsoil, 12 inches of sand drainage layer, and 6 inches of bedding layer for a total of 2.17 feet. This cross section was applied over the complete 14.58-acre landfill area, which includes the slope adjustment for the 3H:1V sideslopes:

$$\begin{aligned} & 147,499 \text{ cubic yards} \\ & - \text{51,044 cubic yards of final cover soils} \\ & - \text{32,280 cubic yards of stockpiled material} \\ & = \text{64,175 cubic yards airspace remaining} \end{aligned}$$

Within the attached volume calculation plan, remaining fill elevations are provided in blue to represent fill (in feet), and cut elevations (in feet) are provided in red. Within the landfill limits, the largest remaining fill height is approximately 29 feet.

A total of 788,500 tons (415,000 cubic yards) of grading and shaping materials are permitted for the facility. As presented in the previously submitted monthly summary reports, based on actual scale house records for the Site, 72,007.75 tons (37,898.82 cubic yards based on a conversion factor of 1.9 tons per cubic yard) were received by the facility in the First Quarter of 2023 which results in 28,886.05 tons (15,203.18 cubic yards) remaining.

### **Landfill Settlement Monitoring**

CEC completed a volume calculation comparing the First Quarter 2023 aerial survey compared to the Fourth Quarter 2022 aerial survey to determine airspace consumed and settlement over the previous quarter. CEC utilized the aerial surveys that were provided by W.L. French dated April 5, 2023 and January 11, 2023. Based on the calculations completed by CEC, a total of 32,725 cubic yards of fill was placed, and there was 22,459 cubic yards of cut/settlement during the First Quarter. Based on the differences in calculations, a total of 10,266 cubic yards of net airspace was consumed over the First Quarter. Attached is a volume calculation plan providing the cuts and fills shown in red and blue, respectively.
