

Winchendon Landfill Site Observation – June 30, 2022

TO: Brian Croteau, DPW Director
FROM: Aaron Sabbs, PE, Tighe & Bond
COPY: Alex Fagnand, PE, Tighe & Bond
DATE: August 4, 2022

On June 30, 2022, Aaron Sabbs from Tighe & Bond visited the Winchendon Landfill (hereby referred to as the "Site") to monitor the grading and shaping activities of the Landfill Closure Project. The Site, which is located at 580 River Street, is the former Mabardy Landfill. It is owned and operated by W.L. French Corporation (Operator) as the Winchendon Landfill. As part of the Landfill Closure Project, the Massachusetts Department of Environmental Protection (MassDEP) has permitted the acceptance of up to 415,000 cubic yards of COMM 97-001 material as defined by MassDEP Policy. In accordance with Condition 13 of the Landfill Closure Agreement between the Town and the Operator, the Site was reviewed for compliance with the following documents:

- Corrective Action Design permit approval issued on September 23, 2020 and Corrective Action Design Plans prepared by Langdon Environmental, LLC, dated June 2019 and revised October 2019.
- Initial Operations Plan, by Langdon Environmental, LLC, dated January 2021, revised to include temporary rip rap settling area.

Landfill Operations

General landfill operations appeared to comply with best practices and the Corrective Action Design. While on site, material was placed and spread by bulldozer in the general area of Section B-B of Sheet C-5 of the Corrective Action Design, and at the eastern edge of the slope, within the limits designated for initial placement.

An upgraded scale was under construction adjacent to the existing scale. The concrete pad had been poured and the area was being prepared for the scale's installation.

Stormwater and Erosion

Stormwater conveyances have been constructed per the Initial Operations Plan as revised to include a temporary rip rap settling area. This plan was submitted to MassDEP under a Major Permit Modification (BWP SQ 11). A swale, including check dams, has been constructed from the temporary stormwater basin to the temporary settling area. Overflow from the temporary stormwater basin runs to the settling area with a PVC culvert running beneath the access road. The swale from the northern section of the site to the temporary stormwater basin has not yet been constructed.

Erosion control was present along the northern, southern, and western edges of the site. There were no noted deficiencies in the erosion control. A temporary swale and access road were installed at the base of the eastern slope.

The check dams within the swale have been rebuilt multiple times to slow the flow of water and capture sediment. Previous sediment buildup has been removed from the swale and temporary settling area. Additional rip rap has been added to repair the check dams.

Erosion on the southwestern slope had caused an accumulation of sediment at the base of the slope. The sediment has been removed from the haybales along the limit of work.

Material Accepted

Tighe & Bond reviewed the attached Net Daily Summary Report received for the month of June, which details the total tonnage and number of loads of material received by the facility. As indicated in Table 1 below, a total of 43,679.43 tons of material was received in June, which results in 306,158.49 tons remaining of the total 788,500 tons permitted. Based on a utilization factor of 1.9 tons per cubic yard of soil, the total volume received in June was 22,989.17 cubic yards, which results in 161,136.05 cubic yards remaining. This represents about 39% of the total permitted volume remaining.
