

Winchendon Landfill Site Observation – September 30, 2022

To: Brian Croteau, DPW Director
FROM: Aaron Sabbs, PE, Tighe & Bond
COPY: Alex Fagnand, PE, Tighe & Bond
DATE: October 20, 2022

On September 30, 2022, Aaron Sabbs from Tighe & Bond visited the Winchendon Landfill (hereby referred to as the "Site") to monitor the grading and shaping activities of the Landfill Closure Project. The Site, which is located at 580 River Street, is the former Mabardy Landfill. It is owned and operated by W.L. French Corporation (Operator) as the Winchendon Landfill. As part of the Landfill Closure Project, the Massachusetts Department of Environmental Protection (MassDEP) has permitted the acceptance of up to 415,000 cubic yards of COMM 97-001 material as defined by MassDEP Policy. In accordance with Condition 13 of the Landfill Closure Agreement between the Town and the Operator, the Site was reviewed for compliance with the following documents:

- Corrective Action Design permit approval issued on September 23, 2020 and Corrective Action Design Plans prepared by Langdon Environmental, LLC, dated June 2019 and revised October 2019.
- Initial Operations Plan, by Langdon Environmental, LLC, dated January 2021, revised to include temporary rip rap settling area.

Landfill Operations

General landfill operations appeared to comply with best practices and the Corrective Action Design. While on site, material was placed and spread by bulldozer in the general area of Section B-B of Sheet C-5 of the Corrective Action Design, within the limits designated for initial placement.

An upgraded scale has recently been installed adjacent to the existing scale and is now operational.

Gravel has been placed at the recently cleared area at the access road entrance to increase the width of the access road. Rip rap has been placed along the southern side of the access road.

Stormwater and Erosion

Stormwater conveyances have been constructed per the Initial Operations Plan as revised to include a temporary rip rap settling area. This plan was submitted to MassDEP under a Major Permit Modification (BWP SQ 11). A swale, including check dams, has been constructed from the temporary stormwater basin to the temporary settling area. Overflow from the temporary stormwater basin runs to the settling area with a PVC drainage pipe running beneath the access road. The swale from the northern section of the site to the temporary stormwater basin has not yet been constructed.

Recent fill activity on the site has been focused in the area of Section B-B, at the slope above the stormwater swale. Placement of fill in this area, along with recent rainfall, appears to have resulted in rill erosion in the slope.

Erosion control was present along the northern, southern, and western edges of the site. There were no noted deficiencies in the erosion control. A temporary swale and access road were installed at the base of the eastern slope.

The check dams within the swale have been rebuilt multiple times to slow the flow of water and capture sediment. Previous sediment buildup has been removed from the swale and temporary settling area. Additional rip rap has been added to repair the check dams. It appears that the PVC drainage pipe was recently broken when additional rip rap was placed. At the time of the site visit there was significant sediment which had built up and dried out in the swale.

Material Accepted

Tighe & Bond reviewed the attached Net Daily Summary Report received for the month of September, which details the total tonnage and number of loads of material received by the facility. As indicated in the attached Table 1, a total of 24,344.83 tons of material was received in September, which results in 202,756.31 tons remaining of the total 788,500 tons permitted. Based on a utilization factor of 1.9 tons per cubic yard of soil, the total volume received in September was 13,813.07 cubic yards, which results in 106,713.85 cubic yards remaining. This represents about 26% of the total permitted volume remaining.

The DEP permit limits the number of loads received to 64 per day without special Town permission. There were no days in September in which the number of loads received was greater than 64.

Enclosed are photographs summarizing the items observed during the site visit, and Table 1, which notes the monthly summary of material accepted.

Photo 1 – Eastern slope and access road.

Photo 2 – Temporary swale and access road.

Photo 3 – Northern slope with rill erosion.

Photo 4 – Temporary stormwater overflow catch basin.

Photo 5 – Swale between temporary stormwater basin and temporary rip rap settling area.

Photo 6 – Swale between temporary stormwater basin and temporary rip rap settling area.

Photo 7 – Location of broken drainage pipe under additional riprap.

Photo 8 - Temporary rip rap settling area.

Photo 9 – Material placed and graded at the northern limits of the site.

Photo 10 – Representative view of erosion control on the western limits of the Site.

Photo 11 –Erosion control cleared of sediment at southwestern limits of the Site.

Photo 12 –Material being placed and graded at the center of the Site.

Photo 13 – Grading at monitoring well.

Photo 14 – Rip rap placed at the access road entrance.
